

Alternative Fuels Engineering Training Course

Professional Development Training Course Outline

Category	General Training	Duration	5 Days
Base Fee	\$1,500 USD	Delivery Mode	Online / On-site Hybrid

Course Introduction

The global energy transition is accelerating rapidly, creating unprecedented demand for professionals skilled in Alternative Fuels Engineering, Renewable Energy Technologies, Green Hydrogen Systems, Biofuels Production, Sustainable Transportation, and Carbon-Neutral Energy Solutions. Governments, industries, and energy companies worldwide are investing heavily in clean energy infrastructure, decarbonization strategies, energy security initiatives, and net-zero emissions programs. Alternative Fuels Engineering Training Course equips participants with the technical knowledge and practical competencies required to design, evaluate, implement, and optimize alternative fuel technologies across transportation, power generation, manufacturing, and industrial sectors.

The course provides in-depth exposure to emerging fuels such as Green Hydrogen, Bioethanol, Biodiesel, Sustainable Aviation Fuel (SAF), Renewable Natural Gas (RNG), Ammonia Fuel, Synthetic Fuels (e-Fuels), and Waste-to-Energy Technologies. Through real-world case studies, industry applications, simulation exercises, and project-based learning, participants will gain expertise in fuel production, storage systems, distribution infrastructure, combustion technologies, energy economics, environmental impact assessment, and regulatory compliance. Graduates will be prepared to contribute effectively to the growing global market for sustainable energy and alternative fuel innovation.

Programme Curriculum

Alternative Fuels Engineering Training Course

Introduction

The global energy transition is accelerating rapidly, creating unprecedented demand for professionals skilled in Alternative Fuels Engineering, Renewable Energy Technologies, Green Hydrogen Systems, Biofuels Production, Sustainable Transportation, and Carbon-Neutral Energy Solutions. Governments, industries, and energy companies worldwide are investing heavily in clean energy infrastructure, decarbonization strategies,

energy security initiatives, and net-zero emissions programs. Alternative Fuels Engineering Training Course equips participants with the technical knowledge and practical competencies required to design, evaluate, implement, and optimize alternative fuel technologies across transportation, power generation, manufacturing, and industrial sectors.

The course provides in-depth exposure to emerging fuels such as Green Hydrogen, Bioethanol, Biodiesel, Sustainable Aviation Fuel (SAF), Renewable Natural Gas (RNG), Ammonia Fuel, Synthetic Fuels (e-Fuels), and Waste-to-Energy Technologies. Through real-world case studies, industry applications, simulation exercises, and project-based learning, participants will gain expertise in fuel production, storage systems, distribution infrastructure, combustion technologies, energy economics, environmental impact assessment, and regulatory compliance. Graduates will be prepared to contribute effectively to the growing global market for sustainable energy and alternative fuel innovation.

Course Duration

5 days

Course Objectives

Upon completion of this training, participants will be able to:

1. Understand global Energy Transition and Net-Zero Emissions strategies.
2. Analyze various Alternative Fuel Technologies and their applications.
3. Evaluate Green Hydrogen Production and storage systems.
4. Design and optimize Biofuel Processing Technologies.
5. Assess Sustainable Aviation Fuel (SAF) opportunities and challenges.
6. Apply Carbon Capture, Utilization and Storage (CCUS) principles.
7. Evaluate Renewable Natural Gas (RNG) and biomethane systems.
8. Develop solutions for Electric Mobility and Hydrogen Mobility integration.
9. Perform Lifecycle Assessment (LCA) and carbon footprint analysis.
10. Analyze Energy Economics and alternative fuel investment feasibility.
11. Implement Smart Energy Management Systems for fuel infrastructure.
12. Ensure compliance with international Environmental Regulations and ESG Standards.
13. Develop innovative projects supporting Decarbonization and Circular Economy initiatives.

Target Audience

1. Mechanical Engineers
2. Chemical Engineers
3. Energy Engineers
4. Petroleum and Gas Professionals
5. Renewable Energy Specialists
6. Sustainability and ESG Professionals
7. Researchers and Academics
8. Government Energy and Environmental Officers

Course Modules

Module 1: Fundamentals of Alternative Fuels and Energy Transition

- Global energy demand and sustainability challenges
- Energy transition pathways and net-zero strategies

- Classification of alternative fuels
- Fuel properties and performance characteristics
- Environmental and economic drivers
- **Case Study:** European Union Renewable Energy Transition Program

Module 2: Biofuels Engineering and Production Technologies

- Bioethanol production processes
- Biodiesel manufacturing technologies
- Feedstock selection and optimization
- Waste-to-biofuel conversion methods
- Biofuel quality standards and regulations
- **Case Study:** Brazil's Large-Scale Ethanol Fuel Program

Module 3: Green Hydrogen Engineering

- Hydrogen production technologies
- Electrolysis systems and renewable integration
- Hydrogen storage and transportation
- Fuel cell technologies
- Hydrogen safety management
- **Case Study:** NEOM Green Hydrogen Project

Module 4: Sustainable Aviation Fuels (SAF) and Advanced Fuels

- SAF production pathways
- Synthetic fuel technologies
- Aviation decarbonization strategies
- Feedstock sustainability assessment
- Future fuel innovations
- **Case Study:** Commercial SAF Deployment by Global Airlines

Module 5: Renewable Natural Gas and Waste-to-Energy Systems

- Biomethane production technologies
- Anaerobic digestion systems
- Landfill gas recovery
- Waste-to-energy conversion processes
- Circular economy applications
- **Case Study:** Sweden's Waste-to-Energy Success Model

Module 6: Alternative Fuel Infrastructure and Distribution

- Fuel storage systems
- Pipeline and transportation networks
- Refueling and charging infrastructure
- Safety and risk management
- Smart monitoring technologies
- **Case Study:** Hydrogen Refueling Network Development in Germany

Module 7: Environmental Impact Assessment and Energy Economics

- Carbon footprint measurement
- Lifecycle assessment methodologies
- ESG and sustainability reporting
- Economic feasibility analysis
- Alternative fuel market forecasting
- **Case Study:** Carbon Reduction Assessment in Transportation Fleets

Module 8: Future Trends and Innovation in Alternative Fuels

- Artificial Intelligence in energy systems
- Digital twin applications
- Carbon-neutral fuel innovations
- Energy storage advancements
- Future global fuel markets
- **Case Study:** AI-Driven Smart Energy Ecosystems

Training Methodology

This course employs a participatory and hands-on approach to ensure practical learning, including:

- Interactive lectures and presentations.
- Group discussions and brainstorming sessions.
- Hands-on exercises using real-world datasets.
- Role-playing and scenario-based simulations.
- Analysis of case studies to bridge theory and practice.
- Peer-to-peer learning and networking.
- Expert-led Q&A sessions.
- Continuous feedback and personalized guidance.

Register as a group from 3 participants for a Discount

Send us an email: info@fineskilltrainingcenter.org or call +254769199797

Certification

Upon successful completion of this training, participants will be issued with a globally- recognized certificate.

Tailor-Made Course

We also offer tailor-made courses based on your needs.

Key Notes

- a. The participant must be conversant with English.
- b. Upon completion of training the participant will be issued with an Authorized Training Certificate
- c. Course duration is flexible and the contents can be modified to fit any number of days.
- d. The course fee includes facilitation training materials, 2 coffee breaks, buffet lunch and A Certificate upon successful completion of Training.
- e. One-year post-training support Consultation and Coaching provided after the course.

f. Payment should be done at least a week before commence of the training, to Fineskill Training Center account, as indicated in the invoice so as to enable us prepare better for you.

Upcoming Scheduled Sessions

Start Date	End Date	Location	Price
28 Sep 2026	02 Oct 2026	Online	\$1,000
28 Sep 2026	02 Oct 2026	Physical	\$1,500
28 Sep 2026	02 Oct 2026	Physical	\$0
28 Sep 2026	02 Oct 2026	Physical	\$0
28 Sep 2026	02 Oct 2026	Physical	\$0
28 Sep 2026	02 Oct 2026	Physical	\$0
28 Sep 2026	02 Oct 2026	Physical	\$0
28 Sep 2026	02 Oct 2026	Physical	\$0
